Summary

With over 20 years of experience in the IT industry, I have gained a deep understanding of various aspects, ranging from the early days of 4GL languages to the latest frameworks for PHP, Java, Node.js, Angular, and API's. Additionally, I have extensive knowledge and experience in working with Kubernetes, a popular container orchestration platform.

I have successfully designed and implemented architectural solutions leveraging Kubernetes to ensure scalable, reliable, and efficient deployments throughout my career. I am well-versed in utilising Kubernetes features such as containerization, auto-scaling, load balancing, and service discovery to create resilient and highly available systems.

Furthermore, my experience working in multicultural environments with colleagues from different countries and cultures has given me a global perspective on best practices in architectural design and effective communication. I believe in fostering strong relationships with co-workers and management, enabling collaborative and successful project outcomes.

Current Employment

Cardmarket January 2024 - May 2026

Senior Backend Engineer / Tech Lead / Engineering Manager

- Implement System Monitoring Tools on the platform's dev and production environments.
- Extended and optimized the Docker environment to support independent deployment and management of backend and frontend services.
- Defined and led the development of a new system architecture to enable full decoupling between frontend and backend components, improving scalability and maintainability.

- Applied Domain-Driven Design (DDD) to migrate the Shipments domain into a distributed architecture. Built frontend applications with React 18 and backend services using Next.js. Implemented telemetry across producers and consumers to validate message delivery through the broker and ensure observability of the system, leveraging Prometheus for metrics, Grafana for visualization, and Loki for centralized logging.
- Designed and implemented a new shipment distribution system using message brokers and Golang, enabling the management department to operate 20x faster with 99.999% accuracy in shipment validation and confirmation.

Berlin Brands Group BBG August 2020 - Dic. 2023

Team Lead Shop Team

- Led feedback discussions and performance evaluations.
- Work closely with the team of 10 developers and 2 QA engineers to accomplish all the features defined in the sprint.
- Maintained clear and effective communication with the PO and stakeholders to ensure the team received accurate and timely information for any questions or clarifications.
- Define with the Head of Engineering/ PO the next milestones OKR / KPI for the team.
- Contributed to the design, optimization, and maintenance on the Docker infrastructure.
- Decouple Project: The Front API microservices initiative to decouple the frontend from the backend in Oxid6. Implemented distributed services using message broker technology to ensure reliable communication and prevent system overload or data loss. Built frontend applications with React 18 and backend services with Next.js as part of the new microservices architecture.

Digital Oetker July 2019 - June 2020

Senior Backend Engineer / Tech Lead

- Led feedback discussions and performance evaluations.
- Design and implement new e-commerce platforms for the Dr. Oetker Group
- Design and implement micro services that helps to the necessities of the e commerce.

Tink GmbH February - June 2017 - June 2019

Backend Team lead

- Led feedback discussions and performance evaluations.
- tink.de
- tink.at

- vattenfall.tink.de
- tink.us
- Migrate magento 1.9 to PHP 7.0.4
- Create and build the microservices architecture for transmit orders to own partners using rabbitMQ and Symfony 3.4, and reduce the overhead of magento
- Migration own IT infrastructure to AWS

Technology stack

PHP / AWS / HTML / Shell Scripting / Mysql / ElasticSearch / JavaScript / GIT / Magento /
Symfony / RabbitMQ / AWS / Serverless - Lambda / DynamoDB

Team members

4 Seniors and 2 Juniors developers and 4 External developers in Poland

Education

BA in Administrative Computer Science, Universidad Tecnológica - UNITEC
México City, 1994

Technical Skills

Databases:

MongoDB	1	2	3	4	5	6	7	8	9	10
DynamoDB	1	2	3	4	5	6	7	8	9	10
Mysql	1	2	3	4	5	6	7	8	9	10
Oracle 11g	1	2	3	4	5	6	7	8	9	10
Elasticsearch	1	2	3	4	5	6	7	8	9	10
Redis	1	2	3	4	5	6	7	8	9	10

Frameworks / Programming Language:

Android	1	2	3	4	5	6	7	8	9	10
Angular	1	2	3	4	5	6	7	8	9	10
awk	1	2	3	4						
C	1	2	3	4	5	6	7	8	9	10

C++	1	2	3	4	5	6	7	8	9	10
Css	1	2	3	4	5	6	7	8	9	10
Dart	1	2	3	4	5	6	7	8	9	10
Flutter	1	2	3	4	5	6	7	8	9	10
Golang	1	2	3	4	5	6	7	8	9	10
Html	1	2	3	4	5	6	7	8	9	10
Java	1	2	3	4	5	6	7	8	9	10
Javascript	1	2	3	4	5	6	7	8	9	10
TypeScript	1	2	3	4	5	6	7	8	9	10
NodeJs	1	2	3	4	5	6	7	8	9	10
ObjectPascal	1	2	3	4	5	6	7	8	9	10
PHP	1	2	3	4	5	6	7	8	9	10
Symfony	1	2	3	4	5	6	7	8	9	10
Perl	1	2	3	4	5	6	7	8	9	10
ReactJs	1	2	3	4	5	6	7	8	9	10
React Active	1	2	3	4	5	6	7	8	9	10
NextJs	1	2	3	4	5	6	7	8	9	10
NestJs	1	2	3	4	5	6	7	8	9	10
Ruby	1	2	3	4	5	6	7	8	9	10
Xml	1	2	3	4	5	6	7	8	9	10

Networking:

Cabling	1	2	3	4	5	6	7	8	9	10
DMZ/firewall	1	2	3	4	5	6	7	8	9	10
Remote access	1	2	3	4	5	6	7	8	9	10

Switches/hubs	1	2	3	4	5	6	7	8	9	10
TCP/IP	1	2	3	4	5	6	7	8	9	10

Software:

Docker	1	2	3	4	5	6	7	8	9	10
Linux	1	2	3	4	5	6	7	8	9	10
Microsoft Office	1	2	3	4	5	6	7	8	9	10
Open Office	1	2	3	4	5	6	7	8	9	10
PhotoShop	1	2	3	4	5	6	7	8	9	10
Windows OS	1	2	3	4	5	6	7	8	9	10

WebServers Administration

Apache	1	2	3	4	5	6	7	8	9	10
Nginx	1	2	3	4	5	6	7	8	9	10

Cloud Computing

AWS	1	2	3	4	5	6	7	8	9	10
Azure	1	2	3	4	5	6	7	8	9	10
Google Cloud	1	2	3	4	5	6	7	8	9	10
Gitlab CI	1	2	3	4	5	6	7	8	9	10
Kubernetes	1	2	3	4	5	6	7	8	9	10
Terraform	1	2	3	4	5	6	7	8	9	10

Personal Initiatives:

Google Play Apps

[Game Huachico-Hero](#)

Geolocation for Mobil / Android OS, (Flutter/Dart)
<https://github.com/leonmex/FollowMeBackSolution>

[TURN/webRTC Server for GeoLocalization App](#), (Golan)

MCP Servers

- **Side-by-Side:** The Side-by-Side MCP Server empowers your IDE-based AI agent to safely read Jira tickets, apply code changes, validate them against QA criteria, comment results back to Jira, and automatically transition the ticket to review. This automation loop is managed securely via the Model Context Protocol (MCP) and Docker, ensuring consistent execution regardless of your local environment.
